

3 Stage Isolated Hydraulic Power Unit (IHPU)

The 3 Stage IHPU can be used for numerous Subsea applications including pressure testing, BOP operation, fluid transfer and hot stab operations. With the capability for 3 selectable pressures each ranging from 0 - 4700psi, the IHPU is designed to be easily and simply reconfigured, with the minimum of hassle.

Connection can be made to any sized fluid reservoir and operate using Glycol and Hydraulic mineral oils as suitable fluid media. The inbuilt depressurisation facility allows safe venting of pressure and pumping fluids back to reservoir avoiding any unwanted leakage to the subsea environment.

Specifications

Hydraulic input	Pressure 207bar (3,000psi) Flow 35 L/min
Hydraulic output	Pressure 325bar @ approx 8 Lpm
General	3 Selectable Pressures Directional Control Supplied with all Hoses Supplied on ROV-Friendly Plate
Fluids	Glycol Mineral Oils

Part Numbers & Options

SRTS-004-SYS	3 Stage IHPU
SRTS-004-S	Remote location Spares Kit

Reservoir bags available. Contact directly for details.

Features

- 3 Selectable Pressures
- Directional Control
- Suitable for Mineral Oils and Glycols
- 325bar Output
- 11.5 L/min

What's in the box

- 3 Stage IHPU
- Operational Hoses
- Documentation & Manual
- Reservoir Bags Available Upon Request
