

30L Liquid Injection System

ROV Tools.

DESCRIPTION

A 30 Litre Liquid Injection System has been combined with a Rotary Cleaning Brush to provide an advanced cleaning system with the capability of injecting cleaning fluid through the head of the brush. The system provides a 30 litre reservoir with the on/off control supplied by a Pilot Operated hydraulic signal from the ROV.

An additional needle valve allows the flow of the liquid to the cleaning brush to be regulated as required, all of which is mounted on lightweight framework. All the connection hoses are included. A single hydraulic supply is required for the On/Off pilot function, two additional hydraulic ports are required to connect the supply/return for the rotation of the brush. The selection of the hydraulic supply to either of the two ports provides clockwise/counter clockwise rotation.

FEATURES

- 30 Litre capacity
- Low pressure fluid injection
- Hydraulic Pilot Control fluid release
- Fully adjustable flow valve
- 12.5" Rotary Brush Head

30L Liquid Injection System

ROV Tools.

SPECIFICATIONS

Brush Weight: 10 kg in air / 7 kg in water
Motor Size: 50 cc

WHAT'S IN THE BOX

30L Reservoir Assembly
12.5" Brush Assembly
All ROV & Tool hoses

PART NUMBERS & OPTIONS

A036-090-001 30L Fluid Injection System.
