

3" Nominal Bore System

Hydraulic Hot Stabs.

DESCRIPTION

The 3" bore single port stab is designed for use with high flows at low or medium pressures. It is ideal for suction anchor operations with a very low weight for its size. The male stab has an aluminum body and plastic hose. A pipe barb suits push-on 3" suction hose and clamps.

The receptacle can be supplied with a pipe weld stub, a flange, or for flush mounting. The flush mounted version has a vent tube to prevent pressure lock. All can be supplied with or without locking pins – the stab is inserted and rotated 45 degrees to lock.

For full product range see sales drawing A001-360-012

FEATURES

10 Bar Operating Pressure in either Suction or Pumping
