

## 501ECN Float Shoe

The Davis-Lynch™ 501ECN float shoe features PVTs check valves and an eccentric nose. Down-jet ports improve circulation, turbulence and even distribution of fluid for well cementing applications even in challenging conditions. Since Forum's purchase of Davis-Lynch over 3,000 501ECN float shoes have been run.

### Applications

- Challenging onshore and offshore hole conditions that necessitate a non-standard nose profile

### Benefits

- Rotates/bounces past ledges or obstructions
- Nose design better navigates adverse conditions for running casing
- Both aluminum and composite nose options are PDC drillable
- Improves circulation for trouble spots
- Washes casing to the bottom

### Features

- Off-center slimmed nose design
- Multiple down-jet ports

### \*Options

- Double valve
- Up-jets
- Aluminum or composite nose
- Auto-fill

\*To be specified at time of order. Options cannot be retrofitted.

# 501ECN Float Shoe

Data for Davis-Lynch Standard Stock Float Equipment manufactured from K55, L80 or P110 grade material and threaded with API 8rd LT&C, ST&C or Buttress Connections

Standard K55 stock Davis Float Equipment meets or exceeds the burst and collapse ratings of L80/N80 & P110 casing depending on casing weight

Back-pressure posted for standard PVTs back-pressure valve

All burst and collapse pressure ratings are calculated in accordance with API bulletin 5C3

Other sizes, materials and threads available upon request

Maximum set-down weight assumes even load distribution
