

AMPIX™ Remote Monitoring

AMPIX Remote Monitoring services gives you access to remotely monitor onshore and offshore equipment operating systems. AMPIX provides a method for pre-emptive troubleshooting. We are able to pinpoint potential issues before equipment failure or downtime occurs and resolve the issue without dispatching a technician.

We have the ability to customize your monitoring system to the equipment and devices that you want to monitor, including:

- Top Drive
- Drawworks
- Mud Pumps
- Catwalks
- Iron Roughnecks
- Frac Fleets
- VFD
- Torque Machines

We can incorporate complete equipment operations software systems or monitor a single device. Some of the current systems that we monitor include:

- The rig operations
- System alarms
- Equipment condition
- Parameter set points
- Remotely troubleshooting rig operating system software and hardware failures

Our remote monitoring service is flexible enough to allow our customers to self-monitor. It is comprehensive enough to provide 24/7 monitoring and reporting by our highly trained technicians.

We can also provide instant notification either through text message or email.

AMPIX allows you to pre-plan equipment maintenance and system change outs, minimizing non-productive time and emergency repairs. Implementation of our monitoring services provided one of our primary customers a 15% drop in non-productive time. They have saved time and money while maintaining a smooth-running operation, providing invaluable non-quantitative benefits for their company and their customers.
