

## ROV Operated Valve

### ROV Tools.

#### DESCRIPTION

The ROV ball valve is suitable for panel mounting into client structures. The stainless steel and plastic mechanisms are self-lubricating and permit a strict 90° rotation, limited by robust end stops. The ball valve stem is protected from bending, axial and rotational overload from the manipulator grip. The handle is suitable for operation by most types of seven function robotic manipulators.

The design is available in sizes from 1" to 20" and working pressure ratings to 10,000 psi (700 bar). Used and trusted subsea by major ROV operators and Oil companies.

For full product range see sales drawing A01-360-019

#### FEATURES

Manipulator/Torque Tool Interface

Up to 20" Valve

Panel or Flush Mounting

Corrosion Resistant

Housing protects valve from accidental damage
